WIREFRAME

The diagram illustrates the interaction between an Editor and a Viewer for a BPMN process.

**Editor (Left):**

- Toolbar:** Includes icons for Pools & Lanes (rectangle with double line), Start & End Events (circle), Tasks & Sub-Processes (rounded rectangle), Gateways (diamond), and Intermediate Events (circle with thick border). Below the toolbar are "show less" and "hide attributes" buttons.
- Workspace:** Displays a BPMN process diagram. It starts with a Start Event, followed by a Task, an Exclusive Gateway, and then two parallel paths. The first path consists of a Task followed by an Exclusive Gateway. The second path consists of a Task followed by an Inclusive Gateway. Both paths merge at a final Exclusive Gateway, which leads to an End Event.
- Properties Panel:** Located on the right of the workspace, it contains fields for Name, Process Owner, Description, and Valid until. The Valid until field is set to "is set with 'publish'".

**Viewer (Right):**

- Name:** A text field containing the process name.
- Process Overview:** A section containing fields for Process Owner, Process Description, and Valid until. The Process Owner field contains "x y z", the Process Description field contains "x y z", and the Valid until field contains "x y. x y. 20x y".
